

Project no: **022936**

Project acronym: **Beneris**

Project title: **Benefit-risk assessment for food: an iterative value-of-information approach**

Instrument: STP – Specific Targeted Project

D12 Contaminant levels in fish

Due date of deliverable: **1 April, 2007**

Actual submission date: **15 May, 2008**

Dissemination level: **PU**

Start date of project: **April, 1st 2006**

Duration: **3,5 years**

Organisation name of the lead contractor for this deliverable:

National Public Health Institute – KTL

D12 Contaminant levels in fish

The data on PBDE, PCDD/F, PCB, and HBCD concentrations in Irish fish can be found in the following Excel table, downloadable from the Beneris wikipages at KTL:

http://www.pyrkilo.fi/beneris/images/0/0b/Dioxin_and_PBDE_and_HBCD_2004_FSAI_fish_survey.xls

(Since this is a relatively large dataset, submitting the data on paper would be unpractical.)
The wiki credentials for accessing the above data can be requested from erkki.kuusisto@ktl.fi.
